

Purissima Hills Water District

Feature:

Of Leaks and Things.

Ernest Solomon, Director

So, it's a beautiful Saturday morning; you're walking the dog and pondering the pleasant weekend ahead. As you round the corner, you hear gurgling. You look around. There it is; water burbling up through the dirt, filling the gutter, running across the road and down the slope. Wow! This could be serious. Who should you call?

Well, this actually happened to a Hills resident. out for a jog one Saturday morning. He called the water district. The District answering service contacted an on-call member of the field crew, who quickly phoned the alert jogger. The leak was repaired that afternoon.

Why is it important to note and repair such leaks quickly? There could be a significant loss of expensive water wasted. Flowing water onto a hillside could saturate the slope below and cause settlement or even slope failure. Customers downstream of a break could have reduced water flows.

So, if you see water flowing where it doesn't usually flow, call it in, day or night, weekend or weekday: 948-1217.

Thank you!

For your continued help in immediately notifying the District of illegal use of fire hydrants. From your concern and quick responses, Last week, we caught 2 contractors intending to take water from hydrants, which could have damaged pipes. Please stay on alert . Email us at
